EDUCATION

Georgia Institute of Technology GPA: 4.0
BS Computer Science, Concentration in Artificial Intelligence and Cyber Security Graduation: December 2027

- **Relevant Coursework:** Computer Architecture, Data Structures, Algorithms, Embedded Systems, Systems Reliability Hardware/Software Integration, Linear Algebra, Statistical Inferences, Machine and Deep Learning, Communication Skills
- **Languages:** Python (NumPy, Pandas), Java, JavaScript/TypeScript, C++, Go, Rust, Kotlin, SQL, C, HTML, CSS, Angular
- **Software:** PyTorch, JAX, PostgreSQL, TensorFlow, Scikit-learn, Docker, Git, AWS (EC2, S3), Figma, Postman, Kubernetes
- **Clubs:** Georgia Tech IOS club – Bootcamp, Create X, Ivan Allen Student Advisory Board, Vertically Integrated Projects

PROFESSIONAL EXPERIENCE

Amazon Redmond, WA
Embedded Software Development Engineer Intern (Amazon Leo) *May 2026 – August 2026*

- Built an over-the-air update for in-orbit satellites FPGAs, making spacecrafts remotely programmable and decreasing latency
- Engineered fault recovery to preserve bitstreams through failed updates, achieving 100% recovery on unserviceable hardware
- Optimized low-level hardware programming to cut hardware flashing to under 45 seconds, accelerating deployments
- Automated the satellite pipelines across transfer, verification, flashing, and recovery, enabling hands-off firmware updates

Lockheed Martin Marietta, GA
Full-Stacks Software Engineering Intern *June 2025 – August 2025*

- Developed end-to-end ML pipelines in Python, applying feature engineering, model training, and evaluation on large datasets
- Co-Authored a Software Assurance Plan, defining documentation standards and coding guidelines to improve code reviews
- Deployed compliance workflows at scale across 12+ avionics systems, enhancing security in distributed environments
- Collaborated with cross-functional teams to deploy production-ready systems, improving performance monitoring at scale

Cyber Software Engineering Intern (AMMM Cybersecurity) *May 2024 – August 2024*

- Developed secure Python pipelines with static analysis, enhancing compliance and software reliability in defense systems
- Investigated vulnerabilities using DISA STIGs and NIST 800-53 mappings, supporting incident remediation and compliance
- Refactored Ada based legacy models improving modularity and maintainability, reducing static analysis warnings by 30%
- Collaborated with Avionics teams to integrate findings into C-130J maintenance systems, decreasing redundant review loops

Authentia.AI Atlanta, GA
Co-founder/CEO *May 2025 – August 2026*

- Built an AI-powered document intelligence platform to analyze fraud-related workflows across insurance, fintech, and banking
- Raised $5K in seed funding through Georgia Tech CREATE-X and advanced development through the accelerator program
- Led customer discovery and client outreach across insurance and financial services, translating feedback into product strategy

AGI Researcher Atlanta, GA
AISI Technical Policy Fellowship *February 2026 – Present*

- Dissecting frontier model architectures to identify latent vulnerabilities and establish robust technical safety standards
- Drafting comprehensive legislative frameworks to govern the deployment of AGI systems while ensuring adversarial security

Georgia Institute of Technology Research Atlanta, GA
Undergraduate Machine Learning Researcher (STEMcomm) *January 2025 – Present*

- Built end-to-end AI features with PyTorch and React, collaborating with researchers and designers to deploy prototypes
- Developed and deployed full-stack research dashboards using React and Flask for real-time data visualization models

PROJECTS

Aegis
Hackalytics - Databricks United Nations Track - Aegis

- Developed a predictive AI platform to identify emerging global humanitarian crises and quantify precise underfunding levels
- Architected an automated NLP pipeline to extract financial funding gaps and sectoral metrics from global news (Scikit-learn)
- Engineered an interactive 3D geospatial sphere model of the globe allowing users to click countries for real-time crisis data.

GeNN CI/CD Workflow Integration
INCF/GSOC 2025 - CI/CD Actions

- Built CI/CD pipelines for GPU simulations, validating model performance metrics and automating statistical testing
- Designed experiments to validate ML workflows, analyzing performance metrics and ensuring reliable deployment pipelines
- Validated workflows on Ubuntu runners, debugging cross-platform jobs to ensure scalable, secure, and reliable deployments

ADDITIONAL

Interests: Cooking, Hiking, Exploring, Basketball, Football, Tennis (Highest UTR 7), Gardening, DIY Builds, Hapkido
Security Clearance: Interim Secret (Debriefed)
Languages: English (Fluent), Hindi (Proficient in Speaking), Spanish (Intermediate in Speaking)
